

CROWDBEATS V2 — STITCH AS CANONICAL THEME + DESIGN GUIDE

You are modifying the CURRENT Crowdbeats V2 mobile + cross-platform web application.

Use this Google Stitch project as the CANONICAL VISUAL THEME AND DESIGN GUIDE:

<https://stitch.withgoogle.com/projects/5326179813018056505>

This Stitch project is NOT merely a loose reference.

It should guide the visual identity of Crowdbeats across:

- color system
- typography
- spacing
- card treatment
- border radius
- surfaces
- shadows
- gradients
- buttons
- chips
- icon treatment
- imagery
- image crops
- map overlays
- profile cards
- empty states
- loading states
- navigation
- interaction patterns
- responsive behavior
- premium polish
- motion language where supported

However:

DO NOT blindly copy every screen layout.

The Stitch project is the canonical THEME and STYLE GUIDE.

The Crowdbeats product structure and user flows remain authoritative.

PRIMARY DESIGN AUTHORITY

Use the Stitch project to answer:

What should Crowdbeats feel like?

What should Crowdbeats cards look like?

How should typography scale?

How should premium surfaces look?

How should profile images be framed?

How should gradients be used?

How should dark mode surfaces be layered?

How should buttons look?

How should music imagery be treated?

How should spacing and density feel?

How should interactive states appear?

Do not reinterpret the theme unnecessarily.

CURRENT APPROVED DISCOVERY STRUCTURE

The Crowdbeats public discovery landing screen must use this hierarchy:

1. LOCATION SEARCH
2. COMPACT GOOGLE MAP
3. TOP 5 NEARBY PROFILES
4. TOP 3 POPULAR PROFILES
5. BOTTOM NAVIGATION

DO NOT restore the rejected:

Nearby / Popular / Live Now

three-large-button layout.

Live Now belongs INSIDE Nearby profile cards and map markers.

STITCH AS THEME, NOT A PAGE TEMPLATE

Use the Stitch project as:

THEME SOURCE COMPONENT GUIDE VISUAL SYSTEM GRAPHIC QUALITY BAR TYPOGRAPHY GUIDE IMAGE
TREATMENT GUIDE INTERACTION GUIDE

Do NOT force Crowdbeats into the exact information architecture of the Stitch project if it conflicts with approved product structure.

If a Stitch screen contains a component that works well:

reuse/adapt its visual language.

If a Stitch screen's layout conflicts with Crowdbeats requirements:

preserve Crowdbeats functionality and translate the Stitch style into the required layout.

STITCH EXTRACTION PASS

Before designing:

inspect the Stitch project and create an internal design inventory.

Identify:

primary colors

secondary colors

accent colors

surface colors

text hierarchy

headline styles

body styles

caption styles

button styles

card radius

card padding

section spacing

icon weights

image ratios

profile image treatments

map treatments

gradients

borders

shadows

navigation patterns

selected states

disabled states

live-status treatments

verification treatments

loading patterns

empty-state patterns

desktop behavior

mobile behavior

Create:

[docs/design/STITCH_CANONICAL_THEME_AUDIT.md](#)

CREATE A CROWDBEATS DESIGN TOKEN SYSTEM

Translate Stitch into reusable production design tokens.

Create or update canonical tokens such as:

colors

surfacePrimary surfaceSecondary surfaceElevated accentPrimary accentSecondary textPrimary textSecondary textMuted success warning error live

typography

displayLarge displayMedium headlineLarge headlineMedium titleLarge titleMedium bodyLarge bodyMedium caption

spacing

space2 space4 space8 space12 space16 space20 space24 space32 space40 space48

radius

radiusSmall radiusMedium radiusLarge radiusXL radiusPill

shadow/elevation

elevationLow elevationMedium elevationHigh

Do not hardcode random visual values screen-by-screen.

GOOGLE STITCH ITERATION REQUIREMENT

Use Google Stitch to produce the redesigned Crowdbeats discovery screen based on the approved structure.

Generate multiple high-fidelity candidates.

Each candidate must use the canonical theme extracted from the Stitch project.

Do not generate generic app designs.

They must visibly belong to the same Crowdbeats visual family.

STITCH LOOP REQUIREMENT

Use Stitch Loop to refine candidates.

For each iteration evaluate:

- adherence to Stitch visual language
- premium feel
- image quality
- map hierarchy
- profile-card quality
- readability
- mobile density
- visual rhythm
- consistency
- uniqueness
- conversion clarity
- accessibility

Iterate until the design looks like a polished production product, not an AI mockup.

GEMINI 3.1 PRO ROLE

Use Gemini Pro 3.1 as the UX and design critic.

Gemini should review:

- information hierarchy
- visual balance
- image usage
- premium perception
- first-glance comprehension
- readability
- mobile usability
- cross-platform consistency
- discoverability
- excessive visual density
- consistency with the Stitch canonical theme

Gemini must reject designs that:

look generic

look like an admin dashboard

look like a rideshare clone

overuse gradients

have weak imagery

use inconsistent card styles

ignore the Stitch theme

show too many categories

bury the compact map

make AI summaries unreadable

BANANA PRO / NANO BANANA PRO ROLE

Use Banana Pro / Nano Banana Pro for HIGH-QUALITY visual refinement where appropriate.

Use it to help create or explore:

- premium musician card imagery
- band-card visual treatments
- map marker visual designs
- gradient surface concepts
- subtle textured backgrounds
- hero-quality musician thumbnails
- polished empty states
- premium placeholders
- visual loading states
- album-like profile framing
- genre-related decorative imagery
- atmospheric live-performance backgrounds

Do NOT use generated production imagery to misrepresent real artists.

For production creator profiles:

use actual approved creator-uploaded media.

Generated imagery may be used for:

- mockups
- placeholders
- non-person decorative backgrounds
- abstract music visuals
- design exploration

Clearly distinguish design assets from actual creator profile content.

IMAGE QUALITY REQUIREMENT

The redesigned Crowdbeats UI must feel image-rich and high-end.

Prioritize:

large sharp profile images

clean crops

consistent aspect ratios

strong focal points

high contrast

minimal clutter

premium lighting

subtle overlays

readable text over imagery

Do not use low-resolution thumbnails.

Do not stretch images.

Do not use poor crops.

FIRST SCREEN VISUAL STRUCTURE

Use the Stitch theme to create:

HEADER

minimal Crowdbeats identity

SEARCH

large premium location search field

COMPACT GOOGLE MAP

rich but calm high-quality marker styling visual consistency with Stitch

NEARBY

top 5 nearby solo musicians and/or bands

POPULAR

top 3 popular musicians and/or bands

BOTTOM NAVIGATION

theme-consistent

SEARCH DESIGN

Search must use Stitch theme styling.

Target:

large rounded input

premium dark surface

clear focus state

Crowdbeats accent treatment

high readability

location icon

autocomplete animation

Do not make it look like a standard browser search box.

COMPACT GOOGLE MAP DESIGN

The map must be visually integrated with the Stitch theme.

Use:

theme-consistent map container

rounded corners

subtle overlay treatment

profile-based map markers

live status accents

selected-marker states

compact map controls

Do not visually overwhelm the rest of the screen.

MAP MARKERS

Use premium custom marker concepts.

Possible design:

circular musician profile image thin Crowdbeats accent ring small LIVE status chip/ring subtle shadow
selected glow band-specific visual indicator if helpful

Do not create giant labels on the compact map.

NEARBY CARD DESIGN

Use the Stitch project's card language.

Each Nearby card should feel visually rich.

Include:

profile image

artist/band name

verification

distance

genre

live status if applicable

venue if applicable

AI-generated profile summary

Tip CTA

View Profile affordance

Use imagery as an important visual anchor.

AI SUMMARY VISUAL TREATMENT

The short AI profile summary must look intentional.

Example:

Jake Rios

Indie • Folk • Acoustic

"Warm acoustic storytelling with a late-night California edge."

Do not make it look like system-generated metadata.

Treat it like premium editorial copy.

Use appropriate typography and spacing.

POPULAR CARD DESIGN

Top 3 Popular profiles should feel slightly editorial and aspirational.

Possible differences from Nearby:

larger imagery

ranking badge

stronger image treatment

featured visual hierarchy

But remain within the same Stitch design system.

LIVE NOW DESIGN

Do not create a standalone Live Now section.

If profile is currently live:

show elegant status on:

map marker

Nearby card

profile

Examples:

LIVE

Performing now

Live at The Holding Company

Use green only for live/status semantics.

Do not overuse green.

HIGH-GRAPHICS REQUIREMENT

This screen should not look flat or overly utilitarian.

Use premium visual depth through:

image-forward cards

subtle overlays

careful gradients

layered surfaces

custom markers

refined micro-interactions

premium image crops

high-quality iconography

deliberate spacing

The result should feel like a polished consumer app comparable in quality to leading music, travel, and mobility applications while remaining visually original to Crowdbeats.

DO NOT OVERDESIGN

High graphics does NOT mean visual clutter.

Do not add:

excess animation

heavy neon everywhere

random gradients

glowing borders on every component

too many badges

large decorative illustrations competing with content

The musician/band content must remain the hero.

CROSS-PLATFORM DESIGN SYSTEM

The Stitch theme must work across:

mobile app

tablet

responsive web

desktop web

Do not create separate visual identities.

Use shared design tokens.

Mobile should prioritize:

touch vertical rhythm image cards bottom navigation

Desktop should prioritize:

balanced columns larger imagery broader map comfortable whitespace

EXISTING FUNCTIONALITY MUST REMAIN

Do not remove:

Firebase

Stripe Connect

public discovery

public profile routing

location autocomplete

geo queries

map

authentication gate

creator profile security

moderation

AI summary pipeline

Tip flow

Nearby query

Popular query

live metadata

STRICT DATA VS DESIGN SEPARATION

Stitch and Banana Pro control DESIGN.

Firebase controls DATA.

Stripe controls PAYMENTS.

Google Maps/Places controls geographic discovery.

Gemini may generate approved summaries and critique UI.

Do not let design tools invent real production data.

DESIGN IMPLEMENTATION

After Stitch/Loop selection:

translate approved design into production code.

Do not stop at screenshots.

Map:

Stitch component → production component

Stitch typography → design tokens

Stitch card → reusable card component

Stitch map marker → real map marker component

Stitch search → Google Places-enabled search component

SCREEN IMPLEMENTATION TARGET

Mobile structure:

Crowdbeats

Search city, town, state or country

[Compact Google Map]

Nearby See All

[Nearby Card 1]

[Nearby Card 2]

[Nearby Card 3]

[Nearby Card 4]

[Nearby Card 5]

Popular See All

[Popular Card 1]

[Popular Card 2]

[Popular Card 3]

Bottom Navigation

STITCH LOOP VISUAL ACCEPTANCE

Do not approve final candidate unless:

STITCH_THEME_MATCH = strong

IMAGE_QUALITY = premium

MAP_VISUAL_INTEGRATION = strong

NEARBY_CARD_QUALITY = premium

POPULAR_CARD_QUALITY = premium

TYPOGRAPHY = consistent

SPACING = consistent

AI_SUMMARY_READABILITY = strong

MOBILE_HIERARCHY = clear

WEB_HIERARCHY = clear

NO_VISUAL_OVERLOAD = true

DESIGN QA

Compare the production implementation against Stitch.

Check:

color accuracy

font sizing

spacing

radius

image ratio

card padding

map dimensions

button dimensions

iconography

alignment

section spacing

selected states

empty states

loading states

responsive behavior

Do not accept loose approximations when the component can be accurately implemented.

STITCH IMPLEMENTATION REPORT

Create:

docs/design/STITCH_CANONICAL_THEME_AUDIT.md

docs/design/STITCH_THEME_TOKENS.md

docs/design/STITCH_DISCOVERY_SCREEN_SPEC.md

docs/design/STITCH_LOOP_FINAL_SELECTION.md

docs/design/STITCH_TO_PRODUCTION_COMPONENT_MAP.md

docs/design/VISUAL_QA_REPORT.md

FINAL REPORT

Return:

1. Stitch project analyzed
2. design tokens extracted
3. Stitch screens generated
4. Stitch Loop iterations completed
5. Gemini Pro 3.1 critiques
6. Banana Pro visual work
7. production components created
8. existing components reused
9. images/visual assets used
10. map design
11. search design
12. Nearby cards
13. Popular cards
14. mobile implementation
15. responsive web implementation
16. design QA results
17. remaining visual mismatches
